APV Series Energy Storage DC Contactor Specification 500 Amps / 900 Vdc

Certification information

Meet RoHS (2011/65/EU);

Application

COMPACT STRUCTURE, LOW NOISE

Contact design yields reduced unit size, low noise while carrying or switching current.

HIGH SAFETY

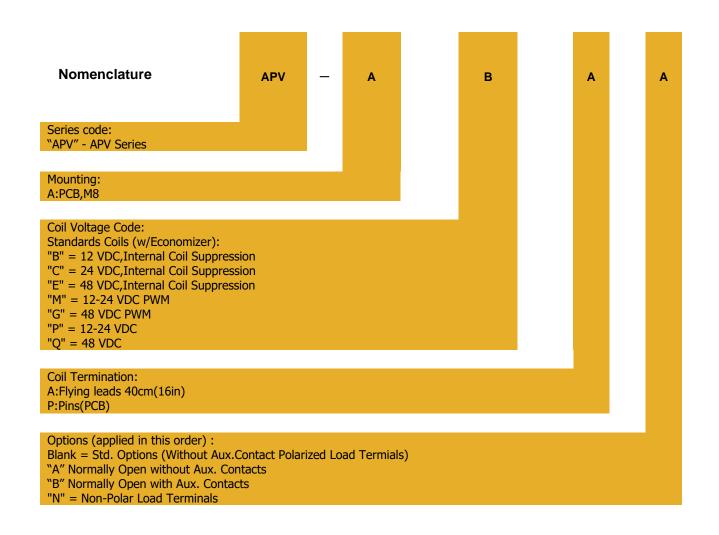

There is no arc leakage due to tight sealing.

HIGH CONTACT RELIABILITY

Stable contact resistance no matter how harsh the environment with sealed contacts

NO SPECIAL MOUNTING REQUIREMENT

Light weight actuator is less impacted by gravity with no special mounting orientation requirements.

APV Series Energy Storage DC Contactor Specification 500 Amps / 900 Vdc

Performance Data:

	nin Contact	Expected Life						
Contact Arrangement		1 Form X (SPST-NO)			Break	250A@1000VDC 1000Cycle		
Max. Switching Voltage		900 VDC	Electrical Endurance	Make / Break	100A@1000VDC 50Cycle 50A@1000VDC 6000Cycle			
Rated current		500A	Mechanical Life		200,000 Cycles			
Max. Short Circuit Current		3000A@450VDC(1s)		AUX Contact				
Short Term Current				Aux Contact Arrangement		1 Form A		
Dielectric Withstanding Voltage	Between Open Contacts	4000VDC 1mA 1min	4000VDC 1mA 1min		ntact Max	2A@30VDC/ 3A@125VAC		
(Initial)	Between Contacts to Coil	2200VAC 1mA 1min		Aux Contact Current Min		100mA@8V		
Insulation Resistance (Initial)	Terminal to Terminal	Min 1000 MΩ			0.417ohms@30VDC/ 0.150ohms@125VAC			
	Terminals to Coil	@1000Vdc	Aux. Co Resistanc					
Contact Resist	tance(initial)	Max. 10 m Ω (1A 6V)						
Limit breaking		2000A@450VDC, 1 Cycle						
Environmental Data				Operate / Release Time				
Shock	Functional	196m/s2 Sine half-ware pulse	Operate Time (includ		udes	30ms,Max.		
	Destructive	490m/s2 Sine half-ware pulse		bounce)		@20C		
Operating Temperature		-40∼+85℃		Release Time		12ms,Max. @ 20C		
Humidity		5%∼85%RH	F					
Weight		0.95Lb (0.43kg)						

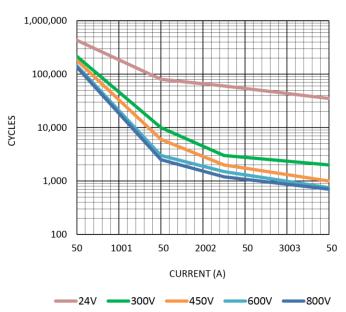

Coil Data at 20℃:

Coil Data												
Coil P/N Designation	В	С	E	М	G	Р	Q					
Nominal Voltage	12Vdc	24Vdc	48Vdc	12-24Vdc	48Vdc	12-24Vdc	48Vdc					
Coil Type	Dual	Dual	Dual	PWM	PWM	External PWM	External PWM					
Coil Voltage,Max(V)	16Vdc	32Vdc	64Vdc	36Vdc	72Vdc							
(Max.) Pick-up Voltage	8Vdc	16Vdc	40Vdc	9Vdc	32Vdc							
(Min.) Drop-out Voltage	0.5Vdc	2Vdc	4Vdc	6Vdc	18Vdc							
Pick-Up Current, Max (75 ms)	3.9A	1.6A	0.97A	3.8A	1.3A							
Coil Current	0.23A	0.097A	0.042A	0.13A	0.03A							
Coil Power	2.8W	2.3W	2W	2W	2W							
Internal Coil Suppression				N/A								
Coil Back EMF	55V	55V	125V	0V	0V							
Reverse Polarity	16V	32V	64V	100	100							

POWER SWITCHING

CURRENT CARRY RATINGS

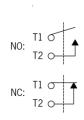

CURRENT CARRY vs TIME

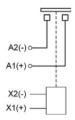

with 85°C terminal temperature rise

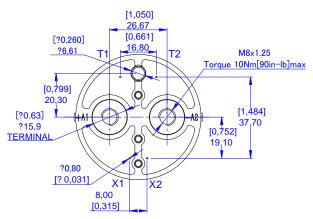

Auxiliary contacts

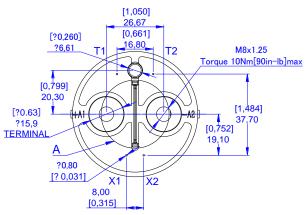

Power Contacts

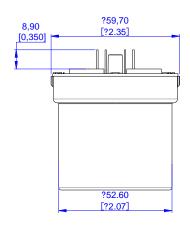

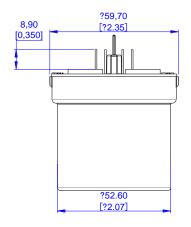

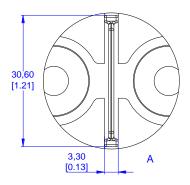

Application Note:

- 1. Be sure to use washer to prevent screws from loosening, all the terminals or copper bar must be in direct contact with the contactor's terminals.
 - Screw tightening torque is specified below. Exceeding the maximum torque can lead to product failure.
 - 8.8-11N.m
 - 1.7-3.3 N.m S
- 2. This is a polar product, please be sure to follow the product label for correct use. When the polarity of the load connection is
- 3. Products with circuit boards are already equipped with reverse surge absorption circuits, so there is no need to use surge protectors.
- 4. Avoid installing in a strong magnetic field (close to a transformer or magnet), or near a heat source.
- 5. The coil and contact of the relay are continuously energized, and the power supply is cut off and immediately connected. At this time, the resistance of the coil will increase due to the increase of the temperature of the coil, so that the suction voltage of the product will increase, which may lead to the excess of the rated suction voltage. In this case, the following measures should be taken: reduce the load current; Limit continuous power or use coil voltage higher than rated suction voltage.
- 6. When the voltage applied to both ends of the coil exceeds the maximum allowable applied voltage, the coil temperature may rise and lead to coil damage and inter-layer short circuit.
- 7. The rating in the contact parameters is the value at the time of the resistive load. When using an inductive load with L/R > 1ms, connect a surge current protection device in parallel with the inductive load. If no measures are taken, the electrical life may be degraded and the continuity may be poor. Please consider sufficient margin space in the design
- 8. Drive power must be greater than coil power or it will reduce performance capability.
- 9. Please do not allow debris and oil to adhere to the main lead end; Make sure that the external terminals are in reliable contact with the main outgoing end of the product, otherwise the temperature rise of the out-going end may be too high due to the excessive contact resistance.
- 10. The lead wire connected with the high voltage end of the product must have the corresponding cur-rent load capacity and heat dissipation capacity (it is recommended to use a copper bar with min 50mm²), to prevent overheating affecting the life of the contactor.
- 11. After the products with energy saving panel are connected to the power supply, the circuit will automatically switch about 100ms later. Please do not repeat the on-off operation during this period, or the energy saving panel of contactor may be damaged.
- 12. Do not use if dropped.
- 13. Altran is impossible to determine all the performance parameters of relays in each specific application area, Therefore, customers should choose the products matching them according to their own conditions of use. If in doubt, contact Altran However, customer will responsible for what they chosen it is the user's responsibility to determine

APV Series

Energy Storage DC Contactor

Specificationeserves the right to make changes. Customers should reconfirm the contents of the specification before **500 Amps 7000 Vel C** for us to supply a new specification if necessary.
